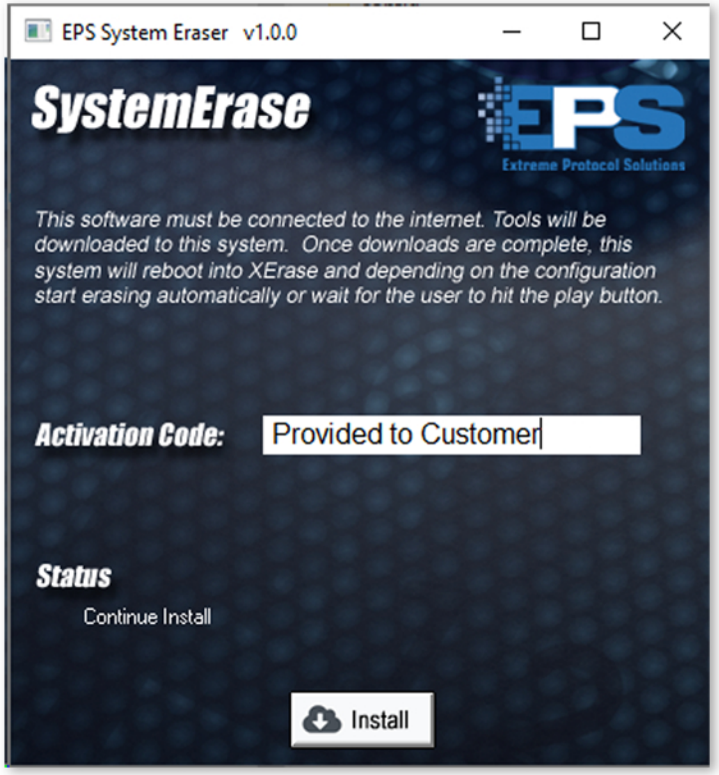
SystemErase (Erasure As a Service)
Step By Step Walk-Through

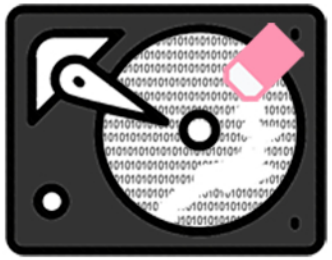
Extreme Protocol Solutions

On your cloud portal, you fill out the License Deployment Form and generate an email with a download link and activation codes that is sent to the customer.

Customer clicks the SystemErase link then downloads, unblocks and runs the program.



Customer enters the Activation Code provided in the email and clicks on the Install Button. SystemErase downloads configuration files and a custom boot image and configures the boot environment for erasure.



Once Installation is complete, the system reboots into a custom DataErasure Image and XErase Data Erasure Software is launched and the erasure begins.

Once the erasure completes, the results are uploaded to the cloud where a report can be generated for the as many systems as desired.
